Art Unit: 2834

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a piezoelectric acceleration sensor, classified in class 310, subclass 329.
- II. Claims 5-8, drawn to a method of manufacturing a piezoelectric accelerometer, classified in class 29, subclass 25.35.

The inventions are distinct, each from the other because:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the accelerometer of Group I can be made by methods other than those of Group II, e.g. each accelerometer could be individually made rather than cut from a sheet of multiple elements.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
